1. Project Overview

Application Name & Version

Admin Dashboard Design v0.1.0

A comprehensive water infrastructure monitoring and management system.

Description

A React-based dashboard providing real-time monitoring and management for water pumping stations and water level monitoring sites. Administrators and operators can track readings, configure alarms, manage sites, and monitor system health across multiple directorates.

Key Features

- Multi-role access control (Admin / Operator)
- Real-time dashboard monitoring
- Site CRUD management
- Flexible alarm configuration (Email, SMS, WhatsApp)
- Historical readings and logs
- Formula-based flow calculations
- Arabic & English localization with RTL support
- Responsive, mobile-first design

User Benefits

- Centralized infrastructure monitoring
- Proactive alarm handling
- Data-driven operational insights
- Secure role-based access
- Reduced training overhead

Technology Stack Summary

Core Framework

- React 18.3.1
- TypeScript (Vite)
- React Router DOM 7.9.5

Build Tool

- Vite 6.4.1 (SWC)

UI Framework

- Tailwind CSS 4.1.17
- Radix UI
- shadcn/ui
- Lucide React Icons

State & Data

- React Context API
- Custom hooks
- Axios 1.13.2

Forms

- React Hook Form 7.55.0
- Formik 2.4.9
- Yup 1.7.1

Charts

- Recharts 2.15.2

Utilities

- i18next 25.7.3
- js-cookie 3.0.5
- jwt-decode 4.0.0
- react-toastify 11.0.5
- xlsx 0.18.5

2. Deployment Environment

Browser Requirements

- Chrome ≥ 90
- Firefox ≥ 88
- Safari ≥ 14
- Edge ≥ 90

Deployment Platform

- **Platform:** Vercel
- **Type:** SPA deployment with history fallback

Environment Configuration

```
const API_BASE_URL = 'https://tele-dairot:5050/api';
```

Build Configuration

- Vite + SWC
- Path alias: @ → ./src
- Tailwind + Autoprefixer

3. Project Structure

Directory Tree (src)

```
src/
├── features/
├── components/
├── shared/
├── i18n/
├── lib/
├── styles/
├── App.tsx
├── main.tsx
└── index.css
```

Feature-Based Module Pattern

```
feature-name/
├── components/
├── hooks/
├── types/
├── utils/
├── services/
└── index.ts
```

Benefits

- High cohesion
- Clear ownership
- Scalable structure
- Easier onboarding

4. Architecture & Design Patterns

System Architecture

```
graph TD
    Browser --> Main[main.tsx] --> App[App.tsx] --> AuthProvider[AuthProvider] --> Router --> DashboardLayout[DashboardLayout] --> Features
    Features --> ApiService[apiService] --> Backend
```

Patterns Used

- Feature-based architecture
- Atomic design principles
- Centralized API service
- Context + hooks state model

5. Core Components Documentation

5.1 LoginPage

Location: src/features/auth/components/LoginPage.tsx

Purpose: User authentication.

English ▾

Irrigation Monitoring System

Email

admin@gmail.com 

Password

..... 

Login

 Secure and encrypted connection

Features

- Credential login
- Validation
- Remember me
- i18n support

5.2 DashboardLayout

Location: src/components/DashboardLayout.tsx

Purpose: Application shell and navigation.

```
interface DashboardLayoutProps {
  currentUser: User;
  onLogout: () => void;
  refreshCurrentUser: () => void;
}
```

Features

- Responsive sidebar
- Role-based menus
- RTL support
- <Outlet /> routing

5.3 DashboardHome

Admin only

6. State Management

Global State – AuthContext

```
interface AuthContextType {
  isAuthenticated: boolean;
  currentUser: User | null;
  handleLogout(): Promise<void>;
  refreshCurrentUser(): void;
}
```

Local State

- Feature hooks
- UI state
- Form state

Persistence

- Cookies: tokens
- SessionStorage: auth flag
- LocalStorage: language

7. Routing

Strategy

- React Router v7
- Nested routes
- Role-based redirects

```
<Route path="/" element={<DashboardLayout />}>
  <Route index element={<DashboardHome />} />
  <Route path="sites" element={<SitesManagement />} />
</Route>
```

8. Styling System

Tailwind CSS v4

- Utility-first
- CVA variants
- CSS variables

RTL Support

- Dynamic dir
- Font switching
- Icon mirroring

9. API Integration

Axios Service Layer

- Auth interceptors
- Token refresh queue
- Centralized error translation

Example

```
apiService.get<ApiResponse<Site[]>>('/v1/Sites');
```

10. Internationalization (i18n)

Setup

- i18next + react-i18next
- Arabic default
- RTL-aware layout

```
t ('sites.title')
```

11. Authentication & Authorization

Flow

- JWT-based auth
- Refresh tokens
- Cookie storage

Roles

Feature	Admin	Operator
Dashboard	☒	☒
Sites	☒	☒
Users	☒	☒

12. Build & Deployment

Build

```
npm run build
```

Platform

- Vercel
- SPA fallback
- Zero downtime

13. Performance Optimizations

Current

- SWC
- Tree shaking
- Memoization

Recommended

- Route-based lazy loading
- React Query
- Table virtualization
- PWA caching

14. Accessibility (a11y)

Current

- Semantic HTML
- ARIA via Radix
- Keyboard support

Enhancements

- Skip links
- Screen reader announcements
- Explicit icon labels

15. Security Considerations

- Token refresh isolation
- Role-based UI enforcement
- Centralized logout on auth failure

16. Troubleshooting Guide

Issue	Resolution
Infinite 401 loop	Check refresh token expiry
RTL layout breaks	Verify <code>_rtl</code> key
Missing data	Confirm <code>API_BASE_URL</code>
Blank page after deploy	Check SPA fallback
